How to Use

Amount to Buy: The recommended dollar amount to invest in each stock
Shares to Buy: The number of shares you can purchase with that amount
New %: Your allocation percentage after making these purchases
Status: ▣ = Balanced (+2%), ▲ = Watch (-2-5%), ▨ = Needs rebalancing (>5%)

Quick Tips

- The calculator distributes your DCA amount proportionally based on target allocations
- Stocks showing ▨ are significantly underweighted - consider increasing their allocation
- You can round share quantities to avoid fractional shares if your broker doesn't support them
- After purchasing, log your transactions in the DCA Log page to update your holdings

Rebalancing Guidelines

- Good (+2%): Portfolio is well-balanced. Continue with normal DCA schedule.
- Watch (+2-5%): Minor deviation. Adjust next DCA purchases to favor underweight positions.
- Rebalance (>5%): Significant deviation. Consider stopping purchases of overweight stocks and increase underweight positions.

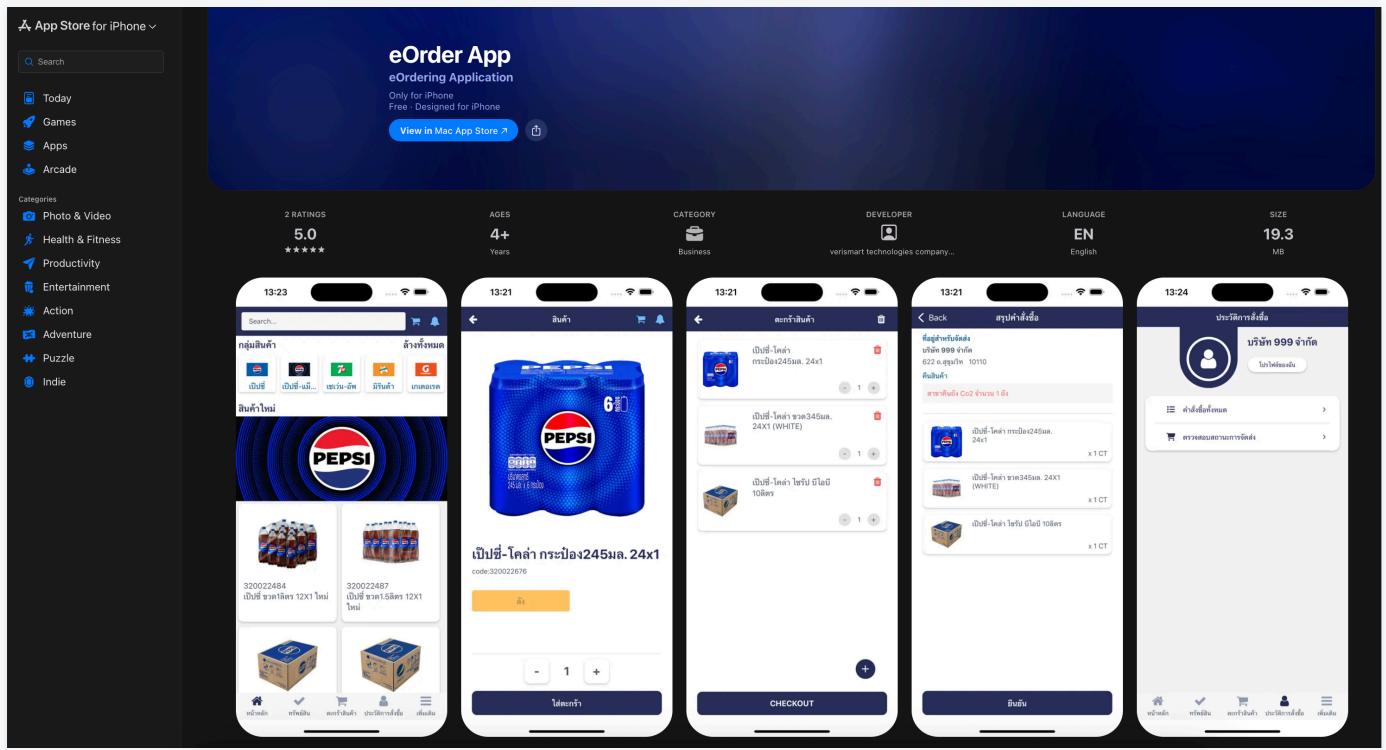

Rebalancing Tips

- Rebalance every 14 weeks (quarterly) or when any position deviates >5%
- Adjust future DCA purchases rather than selling positions (tax efficient)
- Focus DCA on underweight positions for 2-3 weeks to restore balance
- Don't stress about small deviations - ±2% is perfectly acceptable
